$X(1900–3600)$

OMITTED FROM SUMMARY TABLE

THE $X(1900–3600)$ REGION

This high-mass region is covered nearly continuously with evidence for peaks of various widths and decay modes. As no satisfactory grouping into particles is yet possible, we list together in order of increasing mass all the $Y=0$ bumps above 1900 MeV that are coupled neither to $\overline{N}N$ nor to e^+e^-.

$X(1900–3600)$ MASSES AND WIDTHS

We do not use the following data for averages, fits, limits, etc.

VALUE (MeV)	*DOCUMENT ID*
1900 to 3600 OUR LIMIT

$\sim$ 30	BAUD	70	MMS	–	14–15.5 $\pi^- p$

[1] Seen in $J = 2$ wave in one of the two ambiguous solutions.
[2] Not seen by ANTIPOV 72, who performed a similar experiment at 25 and 40 GeV/c.
[3] ASTON 81B sees no peak, has 850 events in Ajinenko+Barth bins. ARESTOV 80 sees no peak.
[4] Seen in $J = 0$ wave in one of the two ambiguous solutions.
[5] Seen in $\rho^- \pi^+ \pi^-$ (ω and η antiselected in 4π system).
[6] Dominant decay into $\rho^0 \rho^0 \pi^+$. BALTAY 78 finds confirmation in $2\pi^+ \pi^- 2\pi^0$ events which contain $\rho^+ \rho^0 \pi^0$ and $2\rho^+ \pi^-$.
[7] Seen in ($K \overline{K} \pi \pi$) mass distribution.
