

$\Sigma(1385) P_{13}$  $I(J^P) = 1(\frac{3}{2}^+)$  Status: \*\*\*\*

Discovered by ALSTON 60. Early measurements of the mass and width for combined charge states have been omitted. They may be found in our 1984 edition Reviews of Modern Physics **56** No. 2 Pt. II (1984).

We average only the most significant determinations. We do not average results from inclusive experiments with large backgrounds or results which are not accompanied by some discussion of experimental resolution. Nevertheless systematic differences between experiments remain. (See the ideograms in the Listings below.) These differences could arise from interference effects that change with production mechanism and/or beam momentum. They can also be accounted for in part by differences in the parametrizations employed. (See BORENSTEIN 74 for a discussion on this point.) Thus BORENSTEIN 74 uses a Breit-Wigner with energy-independent width, since a  $P$ -wave was found to give unsatisfactory fits. CAMERON 78 uses the same form. On the other hand HOLMGREN 77 obtains a good fit to their  $\Lambda\pi$  spectrum with a  $P$ -wave Breit-Wigner, but includes the partial width for the  $\Sigma\pi$  decay mode in the parametrization. AGUILAR-BENITEZ 81D gives masses and widths for five different Breit-Wigner shapes. The results vary considerably. Only the best-fit  $S$ -wave results are given here.

---

### $\Sigma(1385)$ FOOTNOTES

- <sup>1</sup> From fit to inclusive  $\Lambda\pi$  spectrum.
- <sup>2</sup> Includes data of HOLMGREN 77.
- <sup>3</sup> The errors are statistical only. The resolution is not unfolded.
- <sup>4</sup> The error is enlarged to  $\Gamma/\sqrt{N}$ . See the note on the  $K^*(892)$  mass in the 1984 edition.
- <sup>5</sup> From a fit to  $\Lambda\pi^0$  with the width fixed at 34 MeV.
- <sup>6</sup> From fit to inclusive  $\Lambda\pi^0$  spectrum with the width fixed at 40 MeV.
- <sup>7</sup> Redundant with data in the mass Listings.
- <sup>8</sup> Results from  $\Lambda\pi^+\pi^-$  and  $\Lambda\pi^+\pi^-\pi^0$  combined by us.
- <sup>9</sup> The error is enlarged to  $4\Gamma/\sqrt{N}$ . See the note on the  $K^*(892)$  mass in the 1984 edition.
- <sup>10</sup> Consistent with +, 0, and – widths equal.
- <sup>11</sup> An extrapolation of the parametrized amplitude below threshold.
