Note: Signs of couplings from  $\pi N \rightarrow N\pi\pi$  analyses were changed in the 1986 edition to agree with the baryon-first convention; the overall phase

ambiguity is resolved by choosing a negative sign for the  $\Delta(1620) S_{31}$  coupling to  $\Delta(1232)\pi$ .

 **$N(1440)$  FOOTNOTES**

- <sup>1</sup> BAKER 79 finds a coupling of the  $N(1440)$  to the  $N\eta$  channel near (but slightly below) threshold.
- <sup>2</sup> LONGACRE 77 pole positions are from a search for poles in the unitarized T-matrix; the first (second) value uses, in addition to  $\pi N \rightarrow N\pi\pi$  data, elastic amplitudes from a Saclay (CERN) partial-wave analysis. The other LONGACRE 77 values are from eyeball fits with Breit-Wigner circles to the T-matrix amplitudes.
- <sup>3</sup> From method II of LONGACRE 75: eyeball fits with Breit-Wigner circles to the T-matrix amplitudes.
- <sup>4</sup> ARNDT 95 also finds a second-sheet pole with real part = 1383 MeV,  $-2\times$ imaginary part = 210 MeV, and residue with modulus 92 MeV and phase =  $-54^\circ$ .
- <sup>5</sup> See HOEHLER 93 for a detailed discussion of the evidence for and the pole parameters of  $N$  and  $\Delta$  resonances as determined from Argand diagrams of  $\pi N$  elastic partial-wave amplitudes and from plots of the speeds with which the amplitudes traverse the diagrams.
- <sup>6</sup> ARNDT 91 (Soln SM90) also finds a second-sheet pole with real part = 1413 MeV,  $-2\times$  imaginary part = 256 MeV, and residue =  $(78-153i)$  MeV.
- <sup>7</sup> LONGACRE 78 values are from a search for poles in the unitarized T-matrix. The first (second) value uses, in addition to  $\pi N \rightarrow N\pi\pi$  data, elastic amplitudes from a Saclay (CERN) partial-wave analysis.
- <sup>8</sup> An alternative which cannot be distinguished from this is to have a  $P_{13}$  resonance with  $M = 1530$  MeV,  $\Gamma = 79$  MeV, and elasticity =  $+0.271$ .
- <sup>9</sup> LONGACRE 77 considers this coupling to be well determined.
- <sup>10</sup> WADA 84 is inconsistent with other analyses; see the Note on  $N$  and  $\Delta$  Resonances.
- <sup>11</sup> Converted to our conventions using  $M = 1486$  MeV,  $\Gamma = 613$  MeV from NOELLE 78.
