[1] From the $\eta \to \gamma\gamma$ decay.
[2] From the $\eta \to 3\pi^0$ decay.
[3] Observed by threshold-crossing technique. Mass resolution = 4.8 MeV FWHM.
[4] Systematic uncertainties underestimated.
[5] From best-resolution sample of COYNE 71.
[6] From ω-ρ interference in the $\pi^+\pi^-$ mass spectrum assuming ω width 12.6 MeV.

CONSTRAINED FIT INFORMATION

An overall fit to 11 branching ratios uses 37 measurements and one constraint to determine 7 parameters. The overall fit has a $\chi^2 = 28.9$ for 31 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients $\left\langle \delta x_i \delta x_j \right\rangle / (\delta x_i \cdot \delta x_j)$, in percent, from the fit to the branching fractions, $x_i \equiv \Gamma_i/\Gamma_{\text{total}}$. The fit constrains the x_i whose labels appear in this array to sum to one.

[18] Significant interference effect observed. NB of $\omega \to 3\pi$ comes from an extrapolation.
[19] ROOS 70 combines ABRAMOVICH 70 and BIZZARRI 70.
[20] From $\sigma_0^{\omega\pi^0 \to \pi^0\pi^0\gamma}(m_\phi)/\sigma_0^{\omega\pi^0 \to \pi^+\pi^-\pi^0\pi^0}(m_\phi)$ with a phase-space correction factor of 1/1.023.
[21] Not independent of the corresponding $\Gamma(e^+e^-) \times \Gamma(\pi^0\gamma)/\Gamma^2_{total}$.
[22] Superseded by ACHASOV 02F.
[23] In the model assuming the $\rho \to \pi^0\pi^0\gamma$ decay via the $\omega\pi$ and $S\gamma$ mechanisms where S is a broad scalar state.
[24] In the model assuming the $\rho \to \pi^0\pi^0\gamma$ decay via the $\omega\pi$ mechanism only.
[25] Restated by us using B($\eta \to$ charged modes) = 29.2%.
[26] Model independent determination.
[27] Solution corresponding to constructive ω-ρ interference.
[28] Using B($\omega \to \pi^+\pi^-\pi^0$)=0.888 ± 0.007.
[29] Not independent of the corresponding $\Gamma(e^+e^-) \times \Gamma(\pi^+\pi^-\pi^0)/\Gamma^2_{total}$.
[30] Rescaled by us to correspond to ω width 8.4 MeV. Systematic errors underestimated.
[31] Not resolved from ρ decay. Error statistical only.
[32] From the $m_{\pi^+\pi^-}$ spectrum taking into account the interference of the $\rho\pi$ and $\omega\pi$ amplitudes.
[33] Using the data of BARKOV 85.

[34] Using the data of BARKOV 85 in the hidden local symmetry model.
[35] From a model-dependent analysis assuming complete coherence.
[36] Re-evaluated under $\Gamma(\pi^+\pi^-)/\Gamma(\pi^+\pi^-\pi^0)$ by BEHREND 71 using more accurate $\omega \to \rho$ photoproduction cross-section ratio.
[37] Error statistical only. Authors obtain good fit also assuming $\pi^0\gamma$ as the only neutral decay.
[38] No flat $\eta\eta\gamma$ background assumed.
[39] Solution corresponding to constructive ω-ρ interference.
[40] Using $B(\omega \to e^+e^-) = (7.07 \pm 0.19) \times 10^{-5}$ and using $B(\eta \to 3\pi^0) = (32.24 \pm 0.29) \times 10^{-2}$. Solution corresponding to constructive ω-ρ interference. The combined fit from 600 to 1380 MeV taking into account $\rho(770)$, $\omega(782)$, $\phi(1020)$, and $\rho(1450)$ (mass and width fixed at 1450 MeV and 310 MeV respectively). Not independent of the corresponding $\Gamma(e^+e^-) \times \Gamma(\eta\gamma)/\Gamma^2_{\text{total}}$.
[41] Using $B(\omega \to e^+e^-) = (7.07 \pm 0.19) \times 10^{-5}$ and $B(\eta \to 3\pi^0) = (32.2 \pm 0.4) \times 10^{-2}$.
[42] Not independent of the corresponding $\Gamma(e^+e^-) \times \Gamma(\eta\gamma)/\Gamma^2_{\text{total}}$.
[43] Depending on the degree of coherence with the flat $\eta\eta\gamma$ background and using $B(\omega \to \pi^0\gamma) = (8.5 \pm 0.5) \times 10^{-2}$.
[44] Reanalysis of DRUZHININ 84, DOLINSKY 89, DOLINSKY 91 taking into account the triangle anomaly contributions.
[45] Superseded by DZHELYADIN 81B result above.
[46] Using $\Gamma(e^+e^-) = 0.60 \pm 0.02$ keV.
[47] From direct 3γ decay search.
[48] Reanalysis of DRUZHININ 84, DOLINSKY 89, DOLINSKY 91 taking into account the triangle anomaly contributions.
