∼ 1450.0		MARTIN	78	SPEC	10 $K^\pm p \to K^0_S \pi p$

[1] Using both $\eta \to \gamma\gamma$ and $\eta \to \pi^+ \pi^- \pi^0$. From a likelihood scan in the presence of several interfering scalar-meson resonances with fixed width $\Gamma(K_0^*(1430)) = 210$ MeV.

[2] S-Matrix pole. Supersedes BUGG 06. Combined analysis of ASTON 88, ABLIKIM 06C, AITALA 06, and LINK 09 using an s-dependent width with couplings to $K\pi$ and $K\eta'$, and the Adler zero near thresholds.

[3] From the isobar model with a complex pole for the κ.

[4] From a non-parametric analysis.

[5] A Breit-Wigner mass and width.

[6] S-matrix pole. Reanalysis of ASTON 88, AITALA 02, and ABLIKIM 06C including the κ with an s-dependent width and an Adler zero near threshold.

[7] S-matrix pole. Using ASTON 88 and assuming $K_0^*(800)$, $K_0^*(1950)$.

[8] Using ASTON 88 and assuming $K_0^*(800)$.

[9] T-matrix pole. Reanalysis of ASTON 88 data.

[10] Breit-Wigner fit. Using ASTON 88.

[11] Assuming a low-mass scalar $K\pi$ resonance, $\kappa(800)$.

[12] T-matrix pole. Using data from ESTABROOKS 78 and ASTON 88.

[13] J^P not determined, could be $K_2^*(1430)$.
[14] T-matrix pole.
[15] Uses a model for the background, without this background they get a mass 1340 MeV, where the phase shift passes 90°.
[16] Mass defined by pole position. From elastic $K\pi$ partial-wave analysis.
