$\Gamma_{10}$	$e^+ e^-$	$< 6 \times 10^{-10}$	CL=90%

### CONSTRAINED FIT INFORMATION

An overall fit to the total width, 4 partial widths, a combination of partial widths obtained from integrated cross sections, and 6 branching ratios uses 44 measurements and one constraint to determine 8 parameters. The overall fit has a  $\chi^2 = 82.3$  for 37 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \cdot \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

### $\Gamma(\gamma\gamma)$

$\Gamma_7$

The value of this width depends on the theoretical model used. Unitary approaches with scalars typically (with exception of PENNINGTON 08) give values clustering around 2.6 keV; without an S-wave contribution, values are systematically higher (typically around 3 keV).

2.3 ±0.8	<sup>14</sup> BERGER	80B	PLUT	$e^+e^-$

<sup>1</sup> Based on a *K*-matrix analysis of BELLE data from MORI 07, UEHARA 08A, UEHARA 09 and UEHARA 13. The width is derived for the pole on the third sheet which is closest to the physical axis. Supersedes PENNINGTON 08.

<sup>2</sup> Solution A (preferred solution based on  $\chi^2$ -analysis).

<sup>3</sup> Dispersion theory based amplitude analysis of BOYER 90, MARSISKE 90, BEHREND 92, and MORI 07.

<sup>4</sup> Solution B (worse than solution A; still acceptable when systematic uncertainties are included).

<sup>5</sup> From analysis of L3 data at 91 and 183–209 GeV and using SU(3) relations.

<sup>6</sup> With a narrow scalar state around 1220 MeV.

<sup>7</sup> Using a unitarized model with a 300 - 500 keV wide scalar at 1100 MeV.

<sup>8</sup> Using the unitarized model of LYTH 85.

<sup>9</sup> Error includes spread of different solutions. Data of MARK2 and CRYSTAL BALL used in the analysis. Authors report strong correlations with  $\gamma\gamma$  width of  $f_0(1370)$  :  $\Gamma(f_2) + 1/4 \Gamma(f^0) = 3.6 \pm 0.3$  KeV.

<sup>10</sup> Radiative corrections modify the partial widths; for instance the COURAU 84 value becomes  $2.66 \pm 0.21$  in the calculation of LANDRO 86.

<sup>11</sup> Using the MENNESSIER 83 model.

<sup>12</sup> Superseded by BOYER 90.

<sup>13</sup> If helicity = 2 assumption is not made.

<sup>14</sup> Using mass, width and  $B(f_2(1270) \rightarrow 2\pi)$  from PDG 78.
